Abstract

Public libraries have a primary role in providing everyone with access to information. This research is based on the limited identification of themes that can be used as a reference in implementing services to support the SDGs comprehensively. This study aims to identify themes related to developing trends that can be used as a reference in developing public library service indicators to implement SDGs-based services. A scoping review was used in this study, with five stages by Arksey and O'Malley (2005) and Levac, Colquhoun, and O'Brien (2010), that is: Step One: Research Question, Step Two: Identification of Relevant References, Step Three: Selection of References and Data, Step Four: Charting the Data, Step Five: Collating, Summarizing, and Reporting Results. Research findings show that people's information needs depend on their social and economic background and living conditions (e.g., environmental conditions and a safe place). Strong collaboration at local, national, and global levels, including collaboration between public libraries and communities, continuous innovation, and building stable big data, can affect public libraries' achievement in supporting the SDGs.

Keywords: Key concepts—themes, SDGs, Indicators, Public library services, Scoping review.

A. Introduction

The Sustainable Development Goals (SDGs) set by the UN are crucial, and public libraries are significant contributors in helping to reach them. Public libraries provide equitable, sustainable access to information, enhance sustainable development through quality education, reduce inequality, and foster sustainable communities. The International Federation of Library Associations and Institutions (IFLA) has acknowledged the significant role of libraries in advancing the Sustainable Development Goals (SDGs) by offering "Toolkit: Libraries, Development and the United Nations 2030 Agenda", which emphasizes how libraries can support the 17 SDGs through their various programs and services. (IFLA, 2021).

Various studies show that public libraries can be a catalyst for sustainable development by providing access to information, knowledge, and technology for all levels of society (Omona, 2020; Mahdi, Hasanah, & Asari, 2020; Bala Sankar & Bala Sankar, 2022). Library services also need to emphasize Sustainable Development on sustainable welfare targets with three main pillars: economic growth, social inclusion, and the environment (Halisçelik & Soytas, 2019). Library services are aimed at human development, and human development can be achieved in a sustainable, environmentally sound manner (Jain & Jain, 2020). Libraries and librarians' roles in ensuring cyberethical behaviour (Dunmade & Tella, 2023). Public libraries can be a tool for implementing

sustainable development goals by collaborating with other organizations or institutions (Salubuyi et al., 2022). Based on the research findings, they can be grouped thematically, namely:

Access and Availability of Information	People	Planet	Prosperity	Peace	Partnership
1) Access to information	1) Knowledge 2) Social inclusion	The environment	Economic growth	Promoting cyber ethics	Collaborating with other organizations or institutions
2) Technology for all levels of society	3) Human development				

Access and Availability of Information is a service that can be used for all SDG indicators. The scope and findings of these studies indicate that public libraries can participate in implementing the SDGs. However, no prior study has systematically synthesized the service indicators used by public libraries in operationalizing the SDGs.

While there is general awareness of public libraries' potential to support the SDGs, there is still a gap in understanding how library organizations implement SDG principles into their service indicators. Service indicators are statements that public libraries can use to provide services in order to achieve the SDGs. The diverse experiences of library organizations in different countries in adopting and adapting the SDGs show significant variations in approach. However, there has been no comprehensive synthesis that identifies best practices and valuable lessons from these experiences. This scoping review aims to explore and map themes as a framework for developing public library service indicators to support the achievement of the SDGs. It is hoped that understanding these themes will provide insight for library practitioners, policy makers, and researchers about effective strategies for aligning public library services with the Sustainable Development agenda.

B. Research Method

This scoping review was conducted in accordance with the scoping review criteria established by Arksey and O'Malley (2005) and Levac, Colquhoun, and O'Brien (2010). A scoping review facilitated the examination of all pertinent evidence about the specific topic, irrespective of individual study designs, while maintaining a systematic and rigorous methodology (Levac, Colquhoun, and O'Brien, 2010). Identifying themes and integrating them into public library services is essential for advancing the Sustainable Development Goals (SDGs).

Step One: Research Question

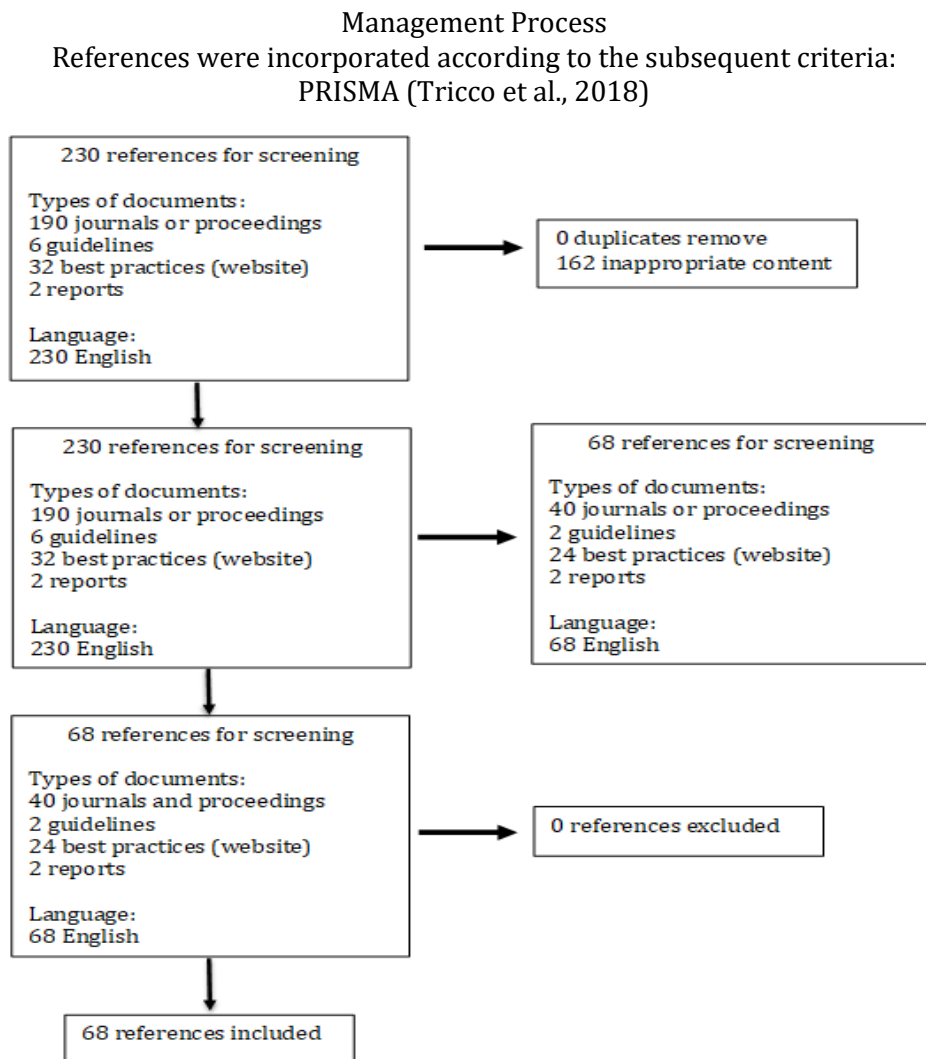

This review was guided by the following research question: "What themes were identified in developing public library service indicators in support of SDGs implementation?"

Step Two: Identification of Relevant References

This study employed a three-step search strategy, according to Joanna Briggs Institute (JBI) scoping review guidelines (Peters et al., 2015). The initial step was a limited search in the keywords: "SDGs" and "Indicator", "SDGs" and "serve", "SDGs" and "library", "SDGs" and "serve of public library", "IFLA Guidances", "IFLA Guidances" and "SDGs",

“public library website in developed country”, “public library website in development country”, “the Indicators of SDG Index in Indonesia”. The researcher subsequently examined the text for terminology present in the titles and abstracts of the retrieved journal articles to identify suitable key phrases, “SDGs” and “Indicator”, “SDGs” and “serve”, “SDGs” and “library”, “SDGs” and “serve of public library”. The researcher analyzed the content for the keywords: “IFLA Guidences”, “IFLA Guidences” and “SDGs”. Furthermore, the keywords of “public library website in developed country”, “public library website in developing country”, the researcher analyzed based on the services offered by public libraries. While for keywords “the Indicators of SDG Index in Indonesia”, the researcher analyzed the indicator theme.

Step Three: Selection of References and Data

Step Four: Charting the Data

At this point, the researcher compiled data from the 68 included references into a table categorizing themes, detailed aspects, and sources. This phase was crucial for delineating the data format and extracting information.

Step Five: Collating, Summarizing, and Reporting Results

At this stage, the researcher utilized Excel to systematically organize the acquired data and facilitate coding into several themes. Thematic analysis was employed to detect, analyze, and narrate emerging patterns (Levac, Colquhoun, & O'Brien, 2010)

C. Discussion

The themes indicators developed to evaluate support for public library services are meant to develop public library service indicators to achieve the SDGs. In this research, themes identified are divided into five indicators based on the grouping of SDG indicators into five pillars, including People, Planet, Prosperity, Peace, and Partnership (UN, 2015). The people (social) pillar consists of SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), and SDG 5 (Gender equality). The planet (environment) pillar consists of SDG 6 (Clean water and sanitation), SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land). The prosperity (economic) pillar consists of SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation, and infrastructure), SDG 10 (Reduced inequalities), and SDG 11 (Sustainable cities and communities). The peace pillar consists of SDG 16 (Peace, justice, and strong institutions). The partnership pillar consists of SDG 17 (Partnerships for the goals). The themes indicators of the five pillars in achieving the SDGs are sourced from IFLA guidelines, research results, best practices of libraries from various countries, and the Indicators of SDG Index in Indonesia. The following are the results of theme identification, which can be used as a reference in developing public library service indicators to support the achievement of SDGs implementation.

Table 1: THEMES IDENTIFIED OF PEOPLE PILLAR INDICATOR (SOCIAL INDICATOR)

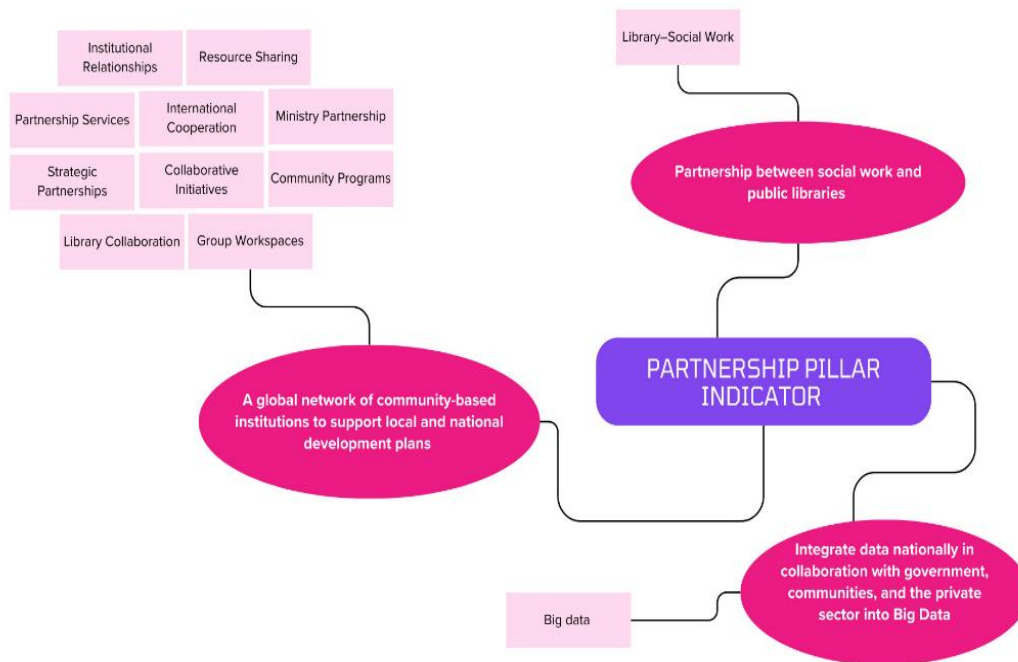

Figure 5. THEMES IDENTIFIED OF THE PARTNERSHIP PILLAR INDICATOR
SDG 17 (Partnerships for the goals)

This scoping review sought to understand the themes identified that can be used as a reference in developing public library service indicators that support or even achieve the SDGs. Here, there are various themes grouped into 5 main pillars to make it easier to understand. However, each SDG indicator is interconnected, including the relationship between one pillar and another. The following are the discussion results for each pillar.

1. PEOPLE PILLAR INDICATOR (SOCIAL INDICATOR)

The people pillar indicator is identical to the social conditions of the community or public library users. SDG 1 (No poverty) reflects a society that does not experience hunger, namely SDG 2 (Zero hunger), has good health and well-being, namely SDG 3 (Good health and well-being), gets adequate education, namely SDG 4 (Quality education), and receive equal treatment, especially for women, namely SDG 5 (Gender equality). Therefore, public libraries need to provide skills development services for educational development related to knowledge development (Chatterjee, Samanta, & Dey, 2023); provide access to local language services (IFLA, 2018) namely by providing collections, including the native literature of the group and reflecting the oral tradition, and non-written knowledge of the people (IFLA Publications 147-Koontz and Gubbin, 2010); provide access to digital services (Basurto, Martínez-Camacho, & Calderón-Swain, 2022) identical to ICT-based services (Paik, 2023). Physical or traditional services related to the availability of physical service facilities or onsite services (Bala Sankar & Bala Sankar, 2022) for all circles.

Public libraries need to give access to information sources and provide counselling on family planning to ensure the welfare of society in building families, including providing access to information sources and counseling on family planning by modern methods (Indicators of SDG Index in Indonesia, 2024; Sachs, Lafortune, & Fuller, 2024). This is because a prosperous family has an impact on the sustainability of the quality of

life. Knowledge of family planning empowers individuals to regulate family size, enhances family quality of life, and serves as a highly cost-effective method to reduce maternal, infant, and child mortality (Chukwuji et al., 2018). Public libraries can also provide information resources and raise awareness regarding food security and improving nutrition to minimize or reduce hunger (Bangani, 2023), which happens in society. Public libraries can participate in creating good health and well-being for the community by developing health literacy skills (IFLA, 2018). Multilingual services (Stockholm Public Library, Sweden dikutip Gupta, 2014) become a strategic bridge in accessing information for people who have different language backgrounds.

Services to support students in learning assistance and supporting classes in teaching and learning activities at school can be the best solution for students in after-school support (IFLA, 2018) and also the learning process in school. Apart from being a service provided directly in the library, it is also the result of collaboration between the public library and the school. Public libraries can also participate in providing programs and services designed to meet the needs of all users (IFLA Publication 147-Koontz and Gubbin, 2010), including women, to support or achieve gender equality.

2. PLANET PILLAR INDICATOR (ENVIRONMENT INDICATOR)

The planet pillar indicator is identical to environmental conditions, namely SDG 6 (Clean water and sanitation), SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land). Public libraries can participate in preserving a sustainable environment and implement green library strategies (Manna & De Sarkar, 2022) also providing access to quality information and best practices that support local water and sanitation management referring to the indicator provide public access to information on water, energy usage, and sanitation (IFLA, 2018), for example through: sharing and circulating library materials that reduce waste; creating a repository of information regarding historical records/documentation of land use and coastal changes; disaster management and risk mitigation; providing information resources and raising awareness about the impacts of climate change; giving access to data and information related to sustainably using oceans, seas and marine resources; open access to information to guide decision-making by local and national governments on various matters/activities; and open access to biodiversity data and literature.

3. PROSPERITY PILLAR INDICATOR (ECONOMIC INDICATOR)

The prosperity pillar indicator is identical to the economic conditions of the community. Sustainable economic conditions can be achieved by referring to SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation, and infrastructure), SDG 10 (Reduced inequalities), and SDG 11 (Sustainable cities and communities). Public libraries can participate in efforts to improve community conditions through programs and services proposed by IFLA (2018), among others: access to electricity and light for reading, learning, and working; providing an "Environmental Information Resource Center" program that enables disseminating information about the environment to the community by using natural resources appropriately; employment and career services; access to research infrastructure, data and quality information to foster innovation and competitiveness; entrepreneurship training as well as legal and financial advice; safe and civic spaces open to all in both urban and rural areas; foster community engagement and citizen participation through local programmes and partnerships with other civil society organisations and local

governments; friendly and neutral spaces for learning that are open to everyone; cultural heritage documentation and preservation for future generations; traditional knowledge and its use in modern society; and safe space for older people, homeless people, refugees, and immigrants offering opportunities to socialise and take part in cultural activities; as well as entrepreneurial services and programmes or incubators of entrepreneurship (Haryanto, Laugu, & Zulaikha, 2024). In addition, public libraries must actively participate in energy-saving environmental conservation and install energy-saving lighting systems when renovating (IFLA, 2018).

4. PEACE PILLAR INDICATOR

Peace is the key to human life being able to continue and be sustainable. The peace pillar indicator is identical to SDG 16 (Peace, justice, and strong institutions). Public libraries can participate and contribute to realizing world peace through: promote cyber ethics by providing access to resources and training sessions on cyber ethics; developing policies and guidelines for appropriate behavior; and enforcing these policies through monitoring tools and filtering software; as well as providing support and guidance to users (Dunmade & Tella, 2023); access to information with skilled staff that help individuals, institutions and governments to communicate, organise, structure and use information in a meaningful way to promote development (IFLA, 2018); offer services of political awareness and community participation programs (Ofodu & Okwoli, 2023); as well as guarantee public access to information and protect fundamental freedoms under national laws and international treaties by giving access to and affordability of justice and Children involved in child labor (Indicators of SDG Index in Indonesia, 2024; Sachs, Lafortune, & Fuller, 2024).

5. PARTNERSHIP PILLAR INDICATOR

Collaboration is crucial in realizing the achievement of library services in supporting the implementation of SDGs. This collaboration is identical to SDG 17 (Partnerships for the Goals). Public libraries must strengthen cooperation and collaboration with government agencies and non-governmental organizations, both local, national, and international; a global network of community-based institutions to support local and national development plans (IFLA, 2018). Cooperation and collaboration between public libraries and communities can be achieved through partnerships between social work and public libraries (Williams & Ogden's, 2023). In this case, public libraries build closeness and provide opportunities for the community to participate in library programs through social work. In addition, integrating data nationally in collaboration with government, communities, and the private sector into big data (Kiconco, 2018) is a crucial issue in order to build shared data. The goal is for the data to be used as evaluation material to develop better programs in the future.

Based on the results of the discussion of the themes in the five pillars that have been discussed, then implementing sustainable innovation (Sivalingam & Gamage, 2023; Chankseliani & McCowan, 2021) It is essential to continue to do this to ensure the sustainability of public library services and their ability to remain on track in supporting the achievement of SDGs in accordance with ever-changing challenges. In addition, the availability of inclusive space is critical to ensure (Toronto Public Library, Canada, 2022). Basically, public libraries have the main task of providing access to information (Lestari & Purwaningtyas, 2023), references (Cabonero, 2023; Delhi Public Library/DPL, India, 2024; National Library of Myanmar/Yangon, 2024), and reader advisory services (Ginting et al., 2023) on all information on the 17 SDG indicators.

D. Conclusion

Meninjau dari riset yang sudah diadakan jadi bisa diambil intinya jika skor rerata keseluruhan Themes that can be used as references in developing public library service indicators to support the achievement of SDGs vary in various studies, guidelines, best practices, and SDGs indicator indices. This phenomenon shows that the information needed by the community is very diverse according to the social and economic background of the community, including the living conditions of the community itself, namely, from the environmental conditions and peaceful places. In addition, public libraries need to build strong collaboration at local, national, and global levels, including collaboration between public libraries and the community in realizing the service programs that they have planned. Continuous innovation and building stable big data are also essential supporting points to ensure that public library services can continue to exist to meet the SDGs targets in 2030.

Limitations

This scoping review included published references only and was in the English language only.
